Summary

B.Tech in Computer Science Engineering (AI & ML) with hands-on experience in data analytics, machine learning, and business intelligence. Skilled in Python, SQL, Power BI, Pandas, NumPy, and Scikit-learn for data cleaning, exploratory data analysis, predictive modeling, and interactive dashboard development. Experienced in building end-to-end data-driven projects and passionate about transforming raw data into actionable business insights through AI-driven solutions.

Skills

- **Programming & Databases:** Python, SQL, MongoDB
- **Data Science & ML:** Scikit-learn, Pandas, NumPy, Data Cleaning, EDA, Descriptive Statistics, Supervised & Unsupervised Learning, Regression, Classification, Model Training & Evaluation
- **Backend & Tools:** Flask (Python), API Integration, Git & GitHub, VS Code
- **Data Visualization:** Matplotlib, Seaborn, Advanced MS Excel, Power BI
- **AI Tools & Automation:** Google AI Studio, ChatGPT, DeepSeek
- **Deployment:** Vercel, Render, Railway, CI/CD Pipeline
- **Core & Soft Skills:** OOPs Concepts, Problem-Solving, Communication, Team Collaboration, Adaptability

Projects

Customer Shopping Behaviour Analysis | *Python, MySQL, Power BI* | [GitHub](#)

- Analyzed 3,900+ customer transactions to uncover behavior patterns, product preferences, and revenue trends, enabling data-driven business decisions.
- Cleaned and transformed raw data using Python (Pandas, NumPy) – handling missing values and outliers, and engineering new features to boost data quality and model readiness.
- Built an end-to-end data pipeline integrating Python, MySQL, and Power BI for seamless data storage, retrieval, and SQL-based analysis.
- Designed an interactive Power BI dashboard consolidating multiple data sources to track KPIs and surface actionable business insights.

Content-Based Movie Recommendation System | *Python, Scikit-learn, NLTK, Streamlit, TMDB API*

[GitHub](#) | [Live Demo](#)

- Built a machine learning-based movie recommendation system on the TMDB 5000 dataset (4,800+ movies) using content-based filtering.
- Preprocessed and merged movie metadata (genres, keywords, cast, crew, overview) using NLTK, then transformed it into feature vectors with CountVectorizer.
- Computed cosine similarity scores to recommend the top similar movies for any selected title.
- Developed a Netflix-inspired Streamlit application with movie posters, ratings, and YouTube trailer integration.
- Added favorites list, search history tracking, and CSV export of recommendations to enhance user experience.

Certifications

- National Level Hackathon Certificate – S-VYASA Campus, Bengaluru
- Data Analytics – Deloitte
- Data Visualization with Python – IBM
- SQL (Basic) – HackerRank
- Python Basics – IBM

Education

Chhatrapati Shivaji Maharaj University, Navi Mumbai	2022 – 2026
--	-------------

B.Tech in Computer Science Engineering (AI & ML), CGPA: 8.0

Sudhagad Education Society Jr. College, Navi Mumbai	2020 – 2022
